1.Introduction

This document describes the functional requirements for performing three key operations on an online travel platform such as MakeMyTrip. These operations include booking a one-way outstation cab, validating user input in gift card services, and extracting data from the hotel booking section.

The system interface represents how users interact with the platform to search, book, and validate various travel-related services. It ensures a smooth, user-friendly, and efficient experience for customers.

The screenshot displays the EaseMyTrip website interface. At the top, the logo "EaseMyTrip .com" is accompanied by the tagline "Bharat ka Travel App". Navigation icons for Flights, Hotels, Trains, Bus, Holidays, Cabs, Activities, Visa, and More are visible. User links for Customer Service, India, and Login or Signup are in the top right.

The main search section features tabs for One Way, Round Trip, and Multicity, with a "Search Lowest Price" button. The search form includes fields for FROM (Delhi), TO (Mumbai), DEPARTURE DATE (18 May'2026), RETURN DATE (Book a round trip to save more), and TRAVELLER & CLASS (1 Traveller, Economy). A prominent orange "SEARCH" button is on the right.

Below the search form, "Special Fares (Optional)" are listed with radio buttons: EaseMyTrip Corporate (Up to 15% more savings), Defence Forces (Up to ₹600 Off), Students (Extra baggage, discount), Senior Citizens (Up to ₹600 Off), and Doctors Nurses (Up to ₹600 Off).

A banner for MOROCCO "Kingdom of light" with the slogan "A Land of Endless Wonder." and a "Know More" button is shown. An "Ad" icon is present. Below the banner, "Exclusive Offers" is displayed, and an "EVA AI Travel Assistant" chatbot is in the bottom right corner.

2.Objective

The objective of this document is to:

- Enable users to book a one-way outstation cab and identify the lowest available fare
- Validate user input by capturing error messages in the gift card section
- Extract and display data from the hotel booking interface
- Ensure the system behaves correctly based on user actions

3.Requirements

To ensure the smooth functioning of a travel booking platform like EaseMyTrip, certain technical requirements must be fulfilled. First, a reliable web server is necessary to host the application and make it accessible to users across the internet.

These components are essential for building and running a travel booking platform efficiently:

- **Backend Technology** – Node.js / PHP / Java (for handling business logic and APIs)
- **Frontend Technologies** – HTML5, CSS3, JavaScript (with modern frameworks like React or Angular)
- **Database** – MySQL / PostgreSQL / NoSQL databases (for storing user, booking, and transaction data)
- **Web Server** – Apache / Nginx (for handling client requests and server communication)
- **APIs & Integrations** – Flight, hotel, and payment gateway APIs for real-time booking services
- **Security Protocols** – SSL certificates, data encryption, and secure authentication mechanisms
- **Cloud Services** – AWS / Azure / Google Cloud (for scalability, storage, and performance optimization)
- **Payment Gateway Support** – Integration with secure payment providers for online transactions
- **Mobile Compatibility** – Responsive design or mobile app support for seamless user experience

These requirements ensure that the platform can handle real-time bookings, provide secure transactions, and deliver a fast, user-friendly experience similar to leading travel websites like EaseMyTrip.

4.Scope

The scope of this system includes:

- Searching and booking outstation cab services
- Filtering vehicles based on car type (SUV)
- Identifying the lowest fare from available options
- Accessing gift card features and validating incorrect inputs
- Navigating hotel booking section and extracting dropdown values
- Displaying results in a structured format

5.SCENARIO 1: Outstation Cab Booking

Requirement Description

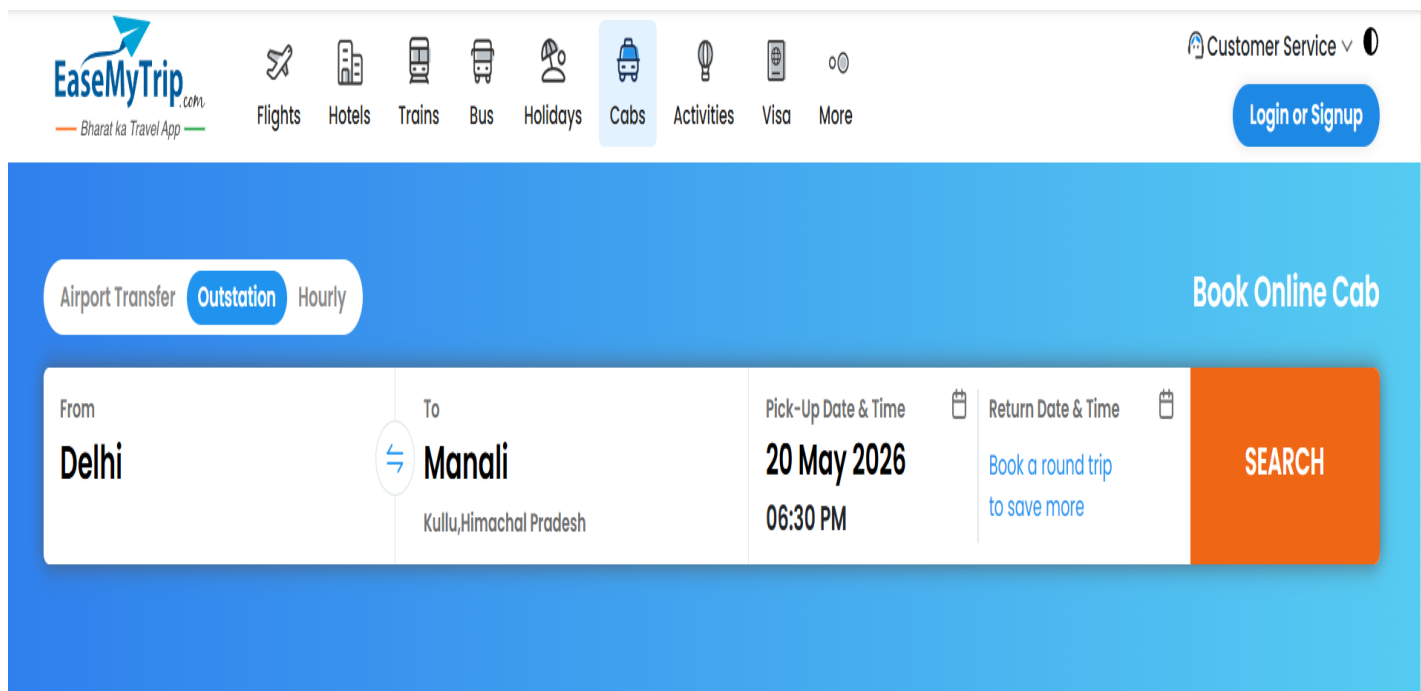

Book a one-way outstation cab from Delhi to Manali, Himachal Pradesh, for a future date and time. The car type must be SUV, and the system should display the lowest available fare.

Functional Requirements

1. Cab Search

- The system should allow users to:
 - Select Outstation trip
 - Choose one-way option
 - Enter pickup location (Delhi)

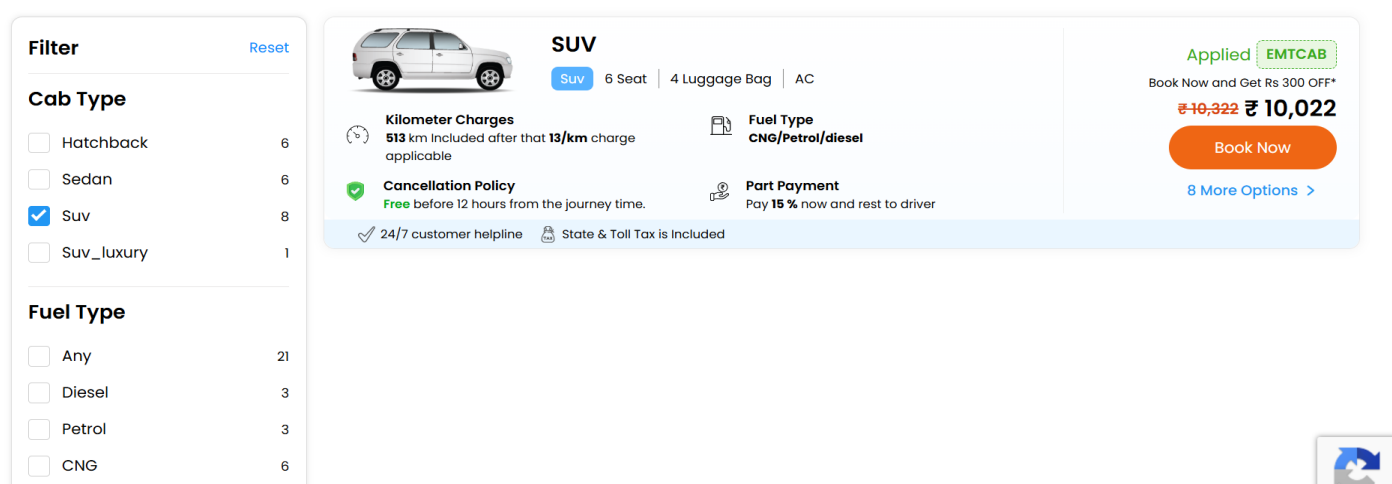

- Enter drop location (Manali)
- Select future date and time

The image shows the EaseMyTrip website header and a booking form. The header includes the EaseMyTrip logo, navigation links for Flights, Hotels, Trains, Bus, Holidays, Cabs, Activities, Visa, and More, a Customer Service link, and a Login or Signup button. The booking form is titled 'Book Online Cab' and has three tabs: Airport Transfer, Outstation (selected), and Hourly. The form fields are: From (Delhi), To (Manali, Kullu, Himachal Pradesh), Pick-Up Date & Time (20 May 2026, 06:30 PM), and Return Date & Time (Book a round trip to save more). A large orange SEARCH button is on the right.

2. Vehicle Selection

- The system should:
 - Display available car categories
 - Allow filtering by SUV type
 - And we need to select the lowest price

The image shows a vehicle selection interface. On the left is a 'Filter' section with a 'Reset' button. It has two sections: 'Cab Type' with options Hatchback (6), Sedan (6), Suv (8, selected), and Suv_luxury (1); and 'Fuel Type' with options Any (21), Diesel (3), Petrol (3), and CNG (6). The main area displays details for an 'SUV' car: 6 Seat, 4 Luggage Bag, AC. It includes a car image, 'Kilometer Charges' (513 km included after that 13/km charge applicable), 'Fuel Type' (CNG/Petrol/diesel), 'Cancellation Policy' (Free before 12 hours from the journey time), and 'Part Payment' (Pay 15% now and rest to driver). At the bottom, it says '24/7 customer helpline' and 'State & Toll Tax is included'. On the right, it shows 'Applied EMT CAB', 'Book Now and Get Rs 300 OFF*', and a price change from ₹10,322 to ₹10,022. A 'Book Now' button and a link to '8 More Options >' are also present.

6.SCENARIO 2: Group Gifting – Invalid Email

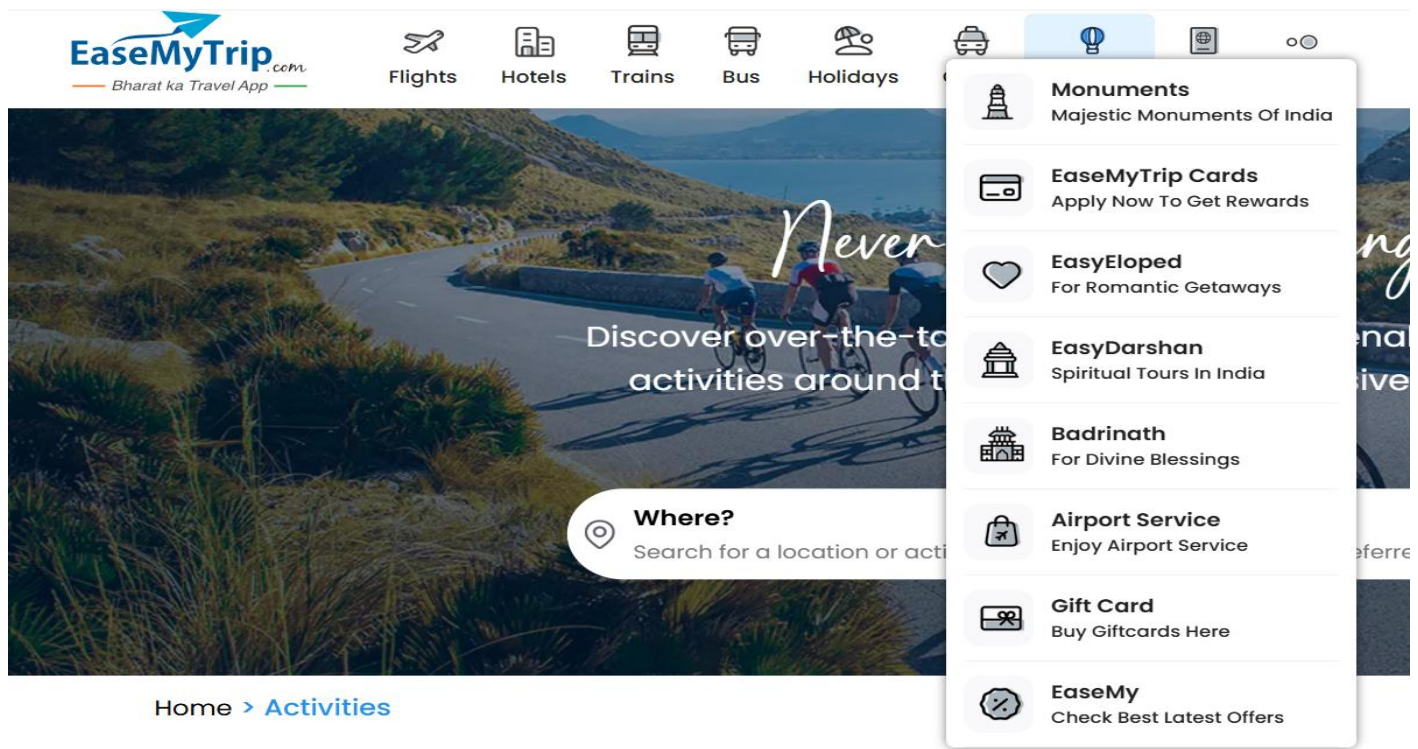

Requirement Description

Navigate to the Gift Cards section, select Group Gifting, enter required details, provide an invalid email, and display the error message.

Functional Requirements

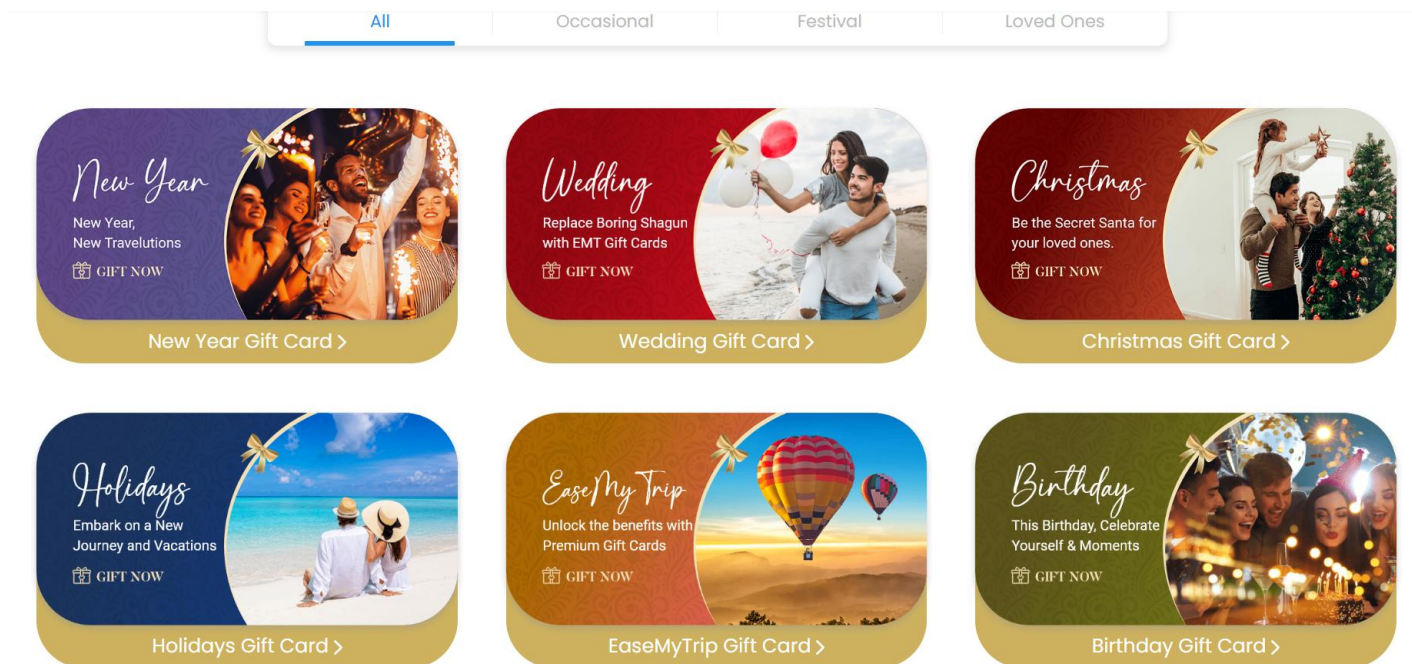

1.Navigate to Gift Cards

- The system should allow access to the Gift Cards section

2.Select Group Gifting

- The system should provide an option for group gifting

3.Enter Details

- The system should allow users to:
 - Enter sender details
 - Enter recipient details
 - Enter email address

7.SCENARIO 3: Hotel Booking – Extract Adult Count

Requirement Description

On the hotel booking page, extract all available numbers for adult persons and store them in a list, then display them.

Functional Requirements

1.Navigate to Hotel Booking

- The system should allow user to open hotel booking section

EaseMyTrip
Bharat ka Travel App

Tuesday

Check-Out
20 May 2026
Wednesday

Rooms & Guests
1 Room **2** Guests

SEARCH

Last Minute Deals Lowest Price Guarantee List Your Hotel For Free

2. Adult Selection Dropdown

- The system should provide a dropdown menu for selecting number of adults

The screenshot displays a hotel booking interface. At the top, a blue banner reads "Same hotel, Cheapest price. Guaranteed!". Below this, a search bar contains the text "Manali" and "Himachal Pradesh, India". To the right of the search bar are fields for "Check-In" (19 May'2026, Tuesday) and "Check-Out" (20 May'2026, Wednesday). Further right is a "Rooms & Guests" section showing "1 Room 12 Guests" with a dropdown arrow. An orange "SEARCH" button is positioned to the right of the search bar. Below the search bar, there are two promotional banners: "Last Minute Deals" and "Lowest Price Guarantee". A dropdown menu is open, showing "Room 1:" with "Adult (Above 12 years)" set to 12 and "Child (Below 12 years)" set to 0. The menu includes "Add Room" and "Done" buttons.

8. Assumptions

- Internet connection is available
- Services are available on selected routes
- Prices may vary dynamically
- Email validation follows standard format rules
- Adult dropdown contains numeric values

9. Conclusion

This document defines the functional requirements for performing core operations on an online travel platform. It ensures that users can search, validate, and extract data efficiently while maintaining system accuracy and usability.
